DOCUMENT-IDENTIFIER: US 4277975 A

TITLE: Digital thermometer

Detailed Description Text (14):

Merchants currently offer radios having digital displays for indicating time or the assigned operating frequency of a tuned station. In such radios, since the digital display does not need to indicate the time or frequency continuously, the display can be shared with apparatus for sensing and selectively displaying temperature at the site of a sensor in degrees Fahrenheit or degrees Celsius. An embodiment incorporating this aspect of the invention is shown in FIGS. 3 and 4 and is described below.
